A - INTRODUCTION

The Gulf Region of the Department of Fisheries and Oceans was established in 1981 to provide a more decentralized management regime of the fisheries of the Gulf of St. Lawrence. This reorganization of federal fisheries management recognized that the Gulf of St. Lawrence constitutes a single ecological and socio-ecological complex, where management considerations and operational procedures frequently differ from the other fisheries of the Atlantic Coast.

The principal objectives of the Gulf Region are effective management of the fisheries resources of the Gulf in conjunction with the Quebec Region, and increased participation in policy formation and decision-making by those involved in the industry. This statistical review of the marine fisheries contributes to the achievement of these principal objectives.

As a brief reminder, the federal statistical system for the Gulf Region collects data on the landings of all vessels engaged in commercial fishing. The transactions used to constitute the statistical base are effected when fishermen sell their catches to commercial buyers. These data are forwarded to department scientists, who use them to assess fish stocks. Fish processing data are gathered from plants operating in the Gulf Region. Statistics on fishermen, the fishing fleet and licences are

obtained through administrative activities such as licensing and vessel certification.

We would like to take this opportunity to thank fishermen, buyers and processors for continuing to cooperate even though they may sometimes find the statistical system to be constricting.

We hope this review will assist all contributors to the marine fishing industry, both public and private, in analyzing and understanding this economic sector which generated a landed value of $ 223 million dollars and a production value (plant production) of $ 460 million dollars in 1989.

B - STRUCTURE AND ORGANIZATION

The Gulf Region encompasses the Province of Prince Edward Island and major parts of the watersheds in New Brunswick, Nova Scotia, and Newfoundland which flow into the Gulf of St. Lawrence. It also includes all the Gulf of St. Lawrence to the northern extremity of the Strait of Belle Isle, west of a line across Cabot Strait from Cape North on the Nova Scotia side to just west of Ramea on the south Coast of Newfoundland and east of a line defining the limit of the Quebec Region which generally divides the Baie des Chaleurs, Strait of Belle Isle and the Gulf in between (see map on next page).

Parameters/ Region	Nfld.	Scotia Fundy	Quebec	Gulf
Number of vessels	13,619	5,951	2,651	7,838
Number of fishermen	22,986	14,975	5,995	19,970
Number of Full-time Fishermen	11,440	8,383	2,981	6,800
Number of licences	20,638	11,812	6,653	24,522
Fishing Communities (Harbours & Infra.)	405	279	110	280
Landings (M. T.)	443,306	532,468	81,465	259,024
% of Landings by vessels < 65'	57%	54%	78%	88%
Landed Value ($000)	221,557	427,739	82,487	223,000
Number of Plants	266	262	125	281
Plant Employment (est. from Plant surveys)	19,200	12,518 (1986)	5,829	21,637 (1987)

A regional comparisons table (page 4) shows that the Gulf Region has the highest number of licences in Atlantic Canada and was second only to the Newfoundland Region in the total number of fishermen category. It's vessels of 65 feet or less in length are responsible for 88% of the Region's total landings.

Gulf Region headquarters are located at the Gulf Fisheries Centre in Moncton, New Brunswick. The Gulf Region has a total of 533 person years located in Moncton, four area offices in Tracadie, N.B.; Antigonish, N.S.; Charlottetown, P.E.I.; and Corner Brook, Nfld, and in some forty district and local offices throughout the Region.

C - STATISTICAL REVIEW

This statistical review is composed of three main sections. The first section deals with the Gulf Region work force. The fisheries work force in the Gulf Region is defined essentially by the number of fishermen, vessels, buyers and processors operating in this region. Also included in this section is information on public investment by the Atlantic Canada Opportunities Agency (ACOA) in the processing sector of the fishing industry in the Gulf Region.

The second section deals with access to the resource. The Department of Fisheries and Oceans uses among other methods

licences, fishing seasons and quotas to preserve and conserve the various species of marine life found in the Gulf Region.

The final section includes the value and quantity of landings in the Gulf Region from 1985 to 1989. These figures represent the landings recorded in specific areas regardless of the vessels' homeports. For example, the Gulf N. S. landings recorded in this report include the unloading of vessels from N. B. , P. E. I., Western NFLD, Quebec and the Scotia Fundy Region.

In certain tables, the figures have been rounded off and may not add up to the indicated totals.

1 - THE WORK FORCE

The bonafide category applies only to fishermen fishing from vessels less than 50' LOA located in the southern Gulf of St. Lawrence (Gulf Region 4T) ; certain other requirements are also to be met. The number of bonafide fishermen is frozen at the current level. The only method of becoming bonafide is by obtaining the bonafide status of an existing fisherman leaving the fishery subject to requirements of Departmental policy.

The commercial category applies to a registered fisherman who does not meet the requirements of a bonafide fisherman.

The full-time category applies to any person who fishes consistently on a commercial basis for the required period of time for his/her area without other employment during that period, with the exception of self-employment in the primary industries on a limited basis (e.g. fisherman/farmer, fisherman/logger), and has been registered as a commercial fisherman for the previous two years. The required period of time is that period of time established by fishermen's committees for a given area and may be varied to take into account variations in conditions from year to year.

The part-time category applies to a registered commercial fisherman who does not meet the requirements of a full-time fisherman.

Table 1 shows that the number of fishermen in the Gulf Region has been declining since 1988. The largest decline was in 1990 when the number dropped by 867. It should be noted that 60 % of this decline is attributed to Western Newfoundland and that 91 % of the drop in the number of fishermen in this area of the Gulf was of part-time fishermen.

Table 2 demonstrates that the total number of vessels in the Gulf decreased by 67 between 1986 (7712 vessels) and 1990 (7649 vessels). However, longer vessels were more numerous in 1990 than they were five years earlier. In 1986, the under 25' vessels

represented 41 % of the entire Gulf fleet. In 1990, the percentage dropped to 37 %. Meanwhile, the percentage of 35' to 44' vessels increased from 40 % to 43 % during the same time period. The same table also shows that the largest number of under 25' vessels is found in western Newfoundland (on average representing 82 % of the entire Gulf fleet of under 25' vessels from 1986 to 1990).

Table 3 shows the number of vessels by province, length group and fishing category. We are able to determine that in the southern Gulf (N. S., N. B., P. E. I.) the bonafide category represents 85 % of the total number of vessels, while in western Newfoundland the full-time category represents 91 % of the total number of vessels in this area.

Table 4A indicates that New Brunswick had the largest number of buyers operating in the Gulf Region in 1988 and 1989. Purchases by buyers operating in the Gulf accounted for 92 % of the total Gulf landings in 1989. Similarly, New Brunswick also has had the highest number of processors (Table 4B). After rising since 1985, the total number of processors in the Gulf Region has diminished by two in 1990.

The quantity and value of plant production by species and product type for the years 1987 to 1989 can be found in table 4C. In 1989, a total of 126,953.6 metric tons was produced by the processing plants at a value of $ 460 million dollars.

Public investment by ACOA in the processing sector of the fishing industry is presented in tables 4D and 4E. Table 4D indicates that almost 20 million dollars have been invested in the Gulf Region since 1985. New Brunswick received 44 %, Nova Scotia 11 %, P. E. I. 25 % and western Newfoundland 20 % of the total amount distributed to the Gulf processing sector during the last 5.5 years. It should be noted that funds forwarded for interest buy downs are not included in these tables.

The aquaculture category includes all funds directed at aquaculture projects in the fishing sector (for example included are funds for processing equipment and the construction of buildings). Infrastructure represents funds advanced for the construction or repair of buildings. Funds given to hire consultants who prepare viability or marketing studies are included in the studies category. The administration/ financial assistance category incorporates money granted to hire management (for example marketing experts). Funds used to buy processing equipment are included in the processing category. The harvesting category consists mainly of on board (vessel) processing of fish.

2 - ACCESS TO THE RESOURCE

A total of 1688 more licences were issued in the Gulf Region in 1990 than in 1986 (Table 5A). Much of the increase can be attributed to the higher number of licences issued to fish such

species as swordfish (increase of 301), capelin (371) and squid (350).

New Brunswick was the area that accounted for the largest number of licences issued from 1986 to 1990 (Table 5C). However, it is also the only area of the Gulf Region to see the number of licences issued decline during that same time period. In 1986, the number of licences issued in New Brunswick accounted for 36 % of the entire Gulf Region. In 1990, the percentage dropped to 32 %.

Table 6A shows that most of the lobster and scallop licences were attached to vessels between 35' to 44' in length. As for groundfish, herring, mackerel and capelin, the bulk of the licences issued are for the fixed gear fishery.

Table 7 is the Canadian Atlantic Quota Report. It contains the total allowable catch for each species, division and fishing fleet in Atlantic Canada.

3 - LANDINGS IN THE GULF REGION

Statistics on landings can be found in tables 8 through 14. Total landings in 1990 amounted to 242 427 166 kg (not including the miscellaneous category) valued at 219.7 million dollars (table 8A). In terms of volume, pelagic and estuarial species dominate landings accounting for 42 % of the Gulf total. Herring was by far the dominant species in this category.

While the pelagic and estuarial category ranked first in volume of landings, it generated only 8 % of the total value of landings. Molluscs and crustaceans generated 72 % of the total value of landings. It is interesting to note the wide fluctuations in the Snow Crab category. The total volume landed has varied between 20.2 million kg in 1986 to 7.7 million kg in 1989. The value of Snow Crab has also varied from an average price of 4.02 $/kg in 1988 to 1.11 $/kg in 1985. The groundfish category accounted for 38 % of the volume landed in the Region and 20 % of the value. Cod represented close to 2/3 of this category.

Tables 8B to 8E give the total landings of the four provinces of the Gulf Region from 1985 to 1989. Nova Scotia's dominant species in 1989 in terms of quantity landed was cod accounting for 39 % of that province's total catch of 30.4 million kg. The value of lobster landings totaled over 21 million dollars out of a total value of 37.8 million dollars.

Almost 49 million kg of herring was landed in New Brunswick in 1989 compared to 24.3 million kg in 1985. Unfortunately, the price dropped from an average of 0.16 c/kg in 1985 to 0.11 c/kg in 1989. The total landed value peaked in New Brunswick in 1987 at almost 94 million dollars with the combined value of snow crab and lobster representing more than 60 % of this total. The decline in both the snow crab and herring industries have influenced the decline to 75.9 million dollars in 1989.

Prince Edward Island's dominant species in both value and volume was lobster in 1989. Other important species in landed volume include cod (11 %), redfish (21 %), herring (10 %), mackerel (7 %) and mussels (6 %). After lobster, oysters were second on the highest value list at 4.4 million dollars (6 % of the total value) and irish moss was third at 3.3 million dollars (5 %).

The volume of cod landings in western Newfoundland accounted for 45% of the total volume of landings in 1989 and herring represented 23 %. Total value of landings at more than 61 million dollars in 1987 has declined to 39.5 million dollars in 1989. The price of cod also dropped from an average of 0.86 c/kg in 1987 to 0.49 c/kg in 1989.

Table 9 presents the landings in the Gulf Region by vessel length. The table indicates that the vessels of 100' and over in length fish predominantly herring and accounted for more than 20 % of the herring landings in 1989.

Tables 10 (volume) and 11 (value) give the monthly landings by species in the Gulf Region in 1989. The peak of the cod landings occur in May while the peak month for herring was September. In the case of lobster, 44 % of the landings are recorded in May.

Table 12 shows the weekly crab landings in the Gulf Region in 1990. The table is divided into three categories: Mid-Shore,

Inshore Cape Breton and Inshore P. E. I..

Table 13 lists the top ten points of landing in the Gulf Region by volume and value from 1985 to 1989. Caraquet, N. B., landed the highest volume in all five years. However, Shippagan, N. B., landed the highest value in all five years. This is attributed to the fact that a high volume of snow crab is landed in Shippagan.

Table 14 traces groundfish landings by province in 1989. This table points out that vessels from outside N. S. represent a significant part of the landed volume of groundfish in this province. Indeed, close to 45 % of the total landings of groundfish has come from vessels that have a homeport outside of N. S. As for the other areas, 90 % or more of the groundfish landings are accounted for by their own vessels.
